

# Quick Start Guide

# Download, Install, Register

As soon as your order is complete, you will be sent (within minutes) two emails. The first email is nothing but a receipt for your purchase. It looks like this:

The second email contains a link to the installation program and your LTA License number.

If you don't get this email, check your Spam folder -or- the Spam folder on your Email Service's Server.

After clicking the download link, your Web Browser will automatically begin the download. Your Browser may warn you the download file type could be dangerous. Authorize the download. After download, run the installation program.

Windows or any security software you have installed on your computer may warn you. Again, authorize the program to run as a trusted program. (Sometimes this option is hidden behind a "More Info" or "Read More" link that you must click to see the option to authorize the program.) The installation process will begin.

This entire installation process should only take a moment.

If you left the box clicked on the “Finish” window, Live Trading Alerts will automatically start and the Registration form will appear.

License Registration

## Registration

Please read the End User License Agreement (EULA), which can be found here:  
<https://hitandruncandlesticks.com/live-trading-alerts-eula/>

Be aware that completing  
Please register

Enter your license number below:

**License Number**

wc\_order\_

**Email address**

**Activate License** **Deactivate License**

Warning: Each license is valid for one user on one computer at a time. Registering a license on a second computer will disable the first installation.

Close

If you get a failure message, please recheck your license number and email for typos and extra spaces and click “Activate License” again. When successful, you will get a pop-up box saying “Activation Successful”. Close the success message and then the Registration form.

**At this point you are ready to begin using LTA!!!**

# Main Application

After starting LTA, all existing Alert Windows and the Main Application open. The purpose of the Main application is simply to design and create new Alert Windows. It looks like this:

This is the LTA main application. It has 4 basic sections. Stock/ETF Universe, Scan to filter universe, Alert Type and Timeframe, and Fields/Filters for Alert Window.

Choose a single universe to get Alerts on (for any one Alert Window)

Choose a scan (there are over 50 built-in) to use to filter the chosen universe

Choose an Alert Type and the Timeframe (Candle Size) on which to be alerted

Choose the fields to display in the Alert Window and any additional Filter parameters.

If additional fields or scans are added to the Alert Window being configured, the additional parameters will display in this area.

Click here to add/delete additional Fields/Filters for the Alert Window being created

Click here to create a new Alert Window

Table with 5 columns: Field, Visible, Min., Max., Filter. Rows include Symbol, Alert Type, Alert Price, Volume vs Avg., High/Low/Vol. Of, and Fractals.

Scans can also be added as additional Fields or as additional Filters (or both) for the Alert Window being created

Table with 5 columns: Field, Visible, Min., Max., Filter. Rows include Symbol, Alert Type, Alert Price, Volume vs Avg., High/Low/Vol. Of, and Fractals.

All Windows can be moved (dragged) to any monitor. This includes the main application and any Alert Windows created.

Basically, just work from top to bottom to create a new Alert Window.

Some users will select “User-Defined List” (Ticker Universe) to be alerted about their own watchlist. In this case, they’d click the “User-Defined List” radio button to create or attach an existing list from List Manager.

In the Field/Filter Section, you can select which fields are visible and if you choose, input filters for this new Window. For example:

Field	Visible	Min.	Max.	Filter
Symbol				
Alert Type	<input checked="" type="checkbox"/>			
Alert Price	<input checked="" type="checkbox"/>	5.00	100.00	
Volume vs Avg.	<input checked="" type="checkbox"/>	1.50		
High/Low/Vol. Of	<input checked="" type="checkbox"/>	2.00		
Fractals	<input checked="" type="checkbox"/>			

Here I have chosen for the new Alert Window I am creating to only display alerts for tickers priced between \$5 and \$100...and only if their volume so far is 1.5 times the “average volume as of the alert time across the last 10 periods.” (If this is a Daily Candle Size window and the Alert comes at 10am, this means today’s volume as of 10am will be at least 1.5 x the average volume as of 10am over the last 10 days.)

The additional filter I have set is that all Alerts that show in the Alert Window will be the High of the last 2 candles.

Click the “Create New Window” button to create the new Alert Window with the properties just specified.

You will be asked to input a Title for the window.

The screenshot shows the 'Live Trading Alerts - v1.0.21.227' application window. The interface includes a menu bar (File, Tools, Window, Help), a title input field, and several configuration sections:

- List of Universes:** Radio buttons for S&P500 Components, DJIA Components, Russell 1000 Components, ETFs, NYSE, Optionable, Russell 2000, Canadian, CBOE Top Option Vol, NASDAQ, QQQ Components, User-Defined list, and All LTA Symbols (selected).
- Scan Filter:** 'Choose Scan' dropdown set to 'Bull RBB', 'Timeframe to scan' dropdown set to 'Daily', and 'Rescan every' dropdown set to '15min'. A status bar indicates '292 symbol(s) were found.' and a 'See Results' button.
- Alert Type:** Radio buttons for 'New High' (selected), 'New Low', and 'High Volume vs Avg.'.
- Candle Size:** Radio buttons for 'Daily' (selected), 'Hourly', '30min', '15min', '5min', '3min', and '1min'.
- Field/Filter Section:** A table with columns 'Field', 'Visible', 'Min.', 'Max.', and 'Filter'. The 'High/Low/Vol. Of' row is highlighted in blue.

A 'Create New Window' dialog box is overlaid on the main window, with a title field containing 'bols - Daily - RBB Pattern' and 'OK' and 'Cancel' buttons. Two pink arrows point to the 'OK' button and the dialog's title field. A 'Create New Window' button is located at the bottom right of the main application window.

## Menus

There are only 2 options under File Menu.

The first one is “Save Window Settings,” which simply saves your existing Alert Window configurations. This option is only needed if you are afraid your computer will crash. Otherwise, the Exit routine will save the existing Window configurations when you close LTA

The other Option is Exit. **This is the only way LTA can be completely “correctly” closed.**

**If you use the “Red X” in the upper right-hand corner of the main application, the program does not close. It simply minimifies to the System Tray.**

To restore LTA main application window, open the system tray and double-click the LTA icon.

Under the Tools menu are 5 choices. However, the 2 on the bottom are really not for normal usage.

It’s possible to practice during non-Market hours by selecting the “Use Demo Server” menu item. However, this does not provide live data and is strictly for demonstration purposes.

Under the Tools menu, the first choice is Options. This allows you to specify the default style for any new Alert Window. You can specify a Font, Font Color, Font Size, Window Background color and whether to have alternating row shading (which makes reading streaming alerts easier).

The second option in the Tools Menu is “Manage User-Defined List” (which opens the List Manager).

The screenshot shows the 'User-Defined List Manager' window. It is divided into three main sections:

- User-defined Lists:** A list of existing lists including '1-12', '2500', '500k', 'CBOE Top 400', 'Rick Master mind', and 'Test List'. A callout bubble points to this section with the text: "Add/Delete a new List of Tickers".
- Edit Symbols in List: Test List:** A list of stock tickers (AA, ADSK, AEO, AER, AGCO, AIZ, AL, ALK, ALLY, AMD, AME, AN, ANGI, ANSS, AQUA, ARNA). A callout bubble points to this list with the text: "Copy/Paste, Type or Delete Tickers from the selected List". Below this list, it shows "no. of symbols: 164".
- Alert Windows:** A list of alert windows with checkboxes. The first one, 'LTA - All Symbols - Daily - 3x8 Trap', is checked. A callout bubble points to this section with the text: "Assign or UnAssign existing Alert Windows to the selected list".

At the bottom, there is a 'List icon:' dropdown menu showing a blue icon. A callout bubble points to it with the text: "Assign the selected list a color Icon (optional)".

Buttons for '+', 'x', 'OK', and 'Cancel' are located at the bottom of the window.

In the List Manager, you can create, edit and assign new lists of tickers. These lists remain and can be used as-is, or modified, later for either existing Alert Windows or new Alert Windows.

If you do copy/paste into a list, the ticker count appears at the bottom of the center column (as a double-check) and you will be informed if any symbols entered do not appear in our universe (we currently have no real-time data on that particular ticker). If we have no data, the ticker will automatically be removed.

If a list icon color is chosen, all Alert Windows that have been assigned to a list will show that icon for quick reference.

The last option under Tools is Registration. As you'd expect, this form is used to activate (register) and deactivate your LTA license.

Examples of when you might deactivate your license would be when you are moving LTA to a different computer or if you ever decide to Stop using LTA.

Under the Window menu is a list of all open LTA Alert Windows.

If any of them get hidden (behind other programs, etc.), then can be brought to the foreground of their current monitor location by choosing them from this menu.

# Alert Window Components

LTA - SP D High

Copy PAUSE

Symbol Alert Type High Of Alert Price Volume vs Avg.

**Server/connection Status**

- Red = Server Down
- Orange = Server Up, but no data has come in the last 60 seconds
- Green = Server Up, data stream active

LTA - SP D High

Copy PAUSE

Symbol Alert Type High Of Alert Price Volume vs Avg.

**Fields can be rearranged via Drag/Drop**

If the alert stream comes too fast, press PAUSE button.

To focus on a single ticker, type that ticker in the BOX. This causes all new alerts to be for only that ticker until this box is cleared again.

LTA - SP D High

Copy PAUSE

Symbol Alert Type High Of Alert Price Volume vs Avg.

- Style...
- Properties... Ctrl+P
- User-Defined List Manager Ctrl+U
- Live Trading Alerts

**Right-click Menu**

- Style = font, background edits
- Properties allows changing Window parameters (just like the main app)
- User-defined List Manager = all list changes (also changing list assigned to windows)
- Live Trading Alerts = Open main App (i.e. create new window)

LTA - All Symbols - Daily - P

Copy Pause

Symbol	Alert Type	High Of	Alert Price	Volume vs Avg.
CBT	↑ D01			
HBI	↑ D01			
CBT	↑ D01			
INFN	↑ D01			
TCBI	↑ D01			
CBT	↑ D01			
AIG	↑ D01	8	43.81	0.70
ECPG	↑ D01	73	30.34	0.80 M01 M03

**Note that if you click the "Red X" in the upper right corner of an Alert Window, this deletes the window.**

The window can obviously be recreated, but it is not saved and closed. The "Red X" deletes the window.

**Note that any LTA window (including all Alert Windows) can be moved to any monitor by simply dragging and dropping the window.**

# Creating an Alert Window Step-by-Step

As an example, we will walk through the process of creating a new Alert Window.

In this case, we will create a Window to get alerts on tickers in the Daily timeframe. Specifically, we will look for alerts on tickers that are Rounded Bottom Breakout (RBB) patterns AND which are also at a New High for the day.

We will look to get Alerts for all tickers within the S&P 500 components universe. In order to limit the number of alerts we receive, we'll place filters on the Alert Window to only provide Alerts when the ticker price is between \$20 and \$50 AND the ticker has also traded 1.5 times the volume today than it has on average (as of this the alert's time) over the last 10 days.

## Steps to Create this Alert Window

LTA - SP500 RBB Daily 20-50
